Basics of Styles

Now we have a button, but no way to format it. When wanting to move the elements around the page, we can use a style sheet!

Basics of Classnames

We can add a classname to our HTML tag to add a stylesheet to it

My Button Component Home

```
export default function Home() {
    return (
    <>
    <div className={styles.main}>
    <title>{"Zeak's Button Page"}</title>
    <MyHeader/>
    </div>
    </>
    );
}
```
