Basics of Styles

Now we have a button and a style, but no way to format it. When wanting to move the elements around the page, we can use a style sheet!

My Button Component Home

```
export default function Home() {
  return (
  <>
    <img src=
    "https://image.petmd.com/files/styles/863x625/p
  </>
  );
}
```

Basics of Classnames

We can add a classname to our HTML tag to add a stylesheet to it

My Button Stylesheet

```
/* In your CSS */
.avatar {
  border-radius: 50%;
}

export default function Home() {
  return (
  <>
    <img className="avatar" src="https://image.petm
  </>
  );
}
```
