Components Example

Components are the bread and butter of React. The way you build any part of the website is in a component. They have their own logic and appearance.

My Button Component

```
function MyButton() {
  return (
      <button>{"I'm a button"}</button>
  );
}
```

My Button Component Home
```
export default function Home() {
  return (
  <>
    <MyButton/>
  </>
  );
}
```

HTML vs JSX

HTML tags use lowercase button, whereas JSX tags use uppercase
MyButton. For a list of html tags checkout w3schools

Header HTML Tag

Headers are important for SEOs (Search Engine Optimization, 5 Min SEO YT)

Header HTML Tag Example

```
export default function Home() {
    return (
        <>
            <h1>Welcome to Zeak's Page!</h1>
            <MyButton/>
        </>
    );
}
```
